Coming out of this assignment, I would say one of the most difficult challenges for me was getting reaccumulated to JavaScript's syntax. I did the summer programming course over the summer, where we mainly focused on Python. It was interesting getting back into JavaScript again!

I encountered new concepts like "Local Storage," which I had never heard of before. This proved to be particularly challenging, but it was a good experience in googling and self-teaching.

I ended up getting frustrated with my JavaScript code for my cart status updates and felt like I needed to talk out my logic. Sadly, I did not have a rubber duck around, so I ended up grabbing a potato from my kitchen and talking aloud my logic to it. Strange, but it really helped (and gave me a laugh along the way)!
